

AI in Education: Bridging India's Learning Gap

InAmigos Foundation Internship — Task 2: AI-Powered Data Analysis Report Author: Yash Raj Goswami | June 2026

Overview

This report uses AI tools to research and analyze how Artificial Intelligence is transforming education globally and in India, with a focus on adoption trends, key statistics, and the gaps that still need to be addressed.

Key Findings

- Global student AI usage rose from **66% (2024) to 92% (2025)**
- A 2025 Harvard study found AI-tutored students learned **2x faster** than in traditional classrooms
- India leads the world in **daily AI usage for learning**, with 74% of Indians optimistic AI will improve student outcomes
- Despite this, India's secondary dropout rate stands at **14.1%**, with **47.4 million children** out of school
- A 2024 PNAS Nexus study warns AI could **widen socioeconomic gaps** without inclusive policy

Contents

File	Description
AI_Education_Report_YashRajGoswami.docx	Full 2-page report (Word format)
charts/chart1_adoption.png	Student AI adoption growth, 2024 vs 2025
charts/chart2_enrollment.png	India school enrollment decline, 2021-22 to 2023-24

Methodology

Research was conducted using AI tools (Claude by Anthropic) to gather, synthesize, and structure insights from credible sources including Stanford HAI, HEPI, UNICEF India, Google/Ipsos, and UDISE+ government education data. Charts were generated using Python (Matplotlib) based on the cited statistics.
